Capability for driving and Capability for driving at night

⊙: Available, Not available: NA

For gradient color, measurement point of visible transmittance is geometrical center.

Category Number

The definition of each category Number, set according to the visible ray transmittance.

- 0: Lenses with a visible ray transmittance of 80% and above
- 1: Lenses with a visible ray transmittance in-between 43% and 80% (including 80%).
- 2: Lenses with a visible ray transmittance in-between 18% and 43% (including 43%).
- 3: Lenses with a visible ray transmittance in-between 8% and 18% (including 18%).
- 4: Lenses with a visible ray transmittance in-between 3% and 8% (including 8%).

Capability for driving at night : Please do not use tinted over 25% lens at dusk and night driving.

Capability for driving : It may be hard to recognize signals through special tinted lens like BLUE, GREEN or RED color.
Therefore, please do not use such lenses for driving
Please do not use tinted over 92% lenses for driving even if it is in the daytime.
