Supper assist type that supports those who constantly view screens on a multi-display for e-sports or work.

Max. +1.25D

How REST assists your eyes

Extended periods of close-up viewing can lead to eye fatigue. This happens as the ciliary muscle in your eyes constantly adjusts the lens inside to maintain focus on near objects. Tokai's REST lenses are designed with additional power to ease this adjustment process, thereby minimizing the strain on your ciliary muscles and promoting prolonged visual comfort.
